**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-2, 4-5 & 7-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Sulcek [U.S. Patent No. 3,773,399]. Sulcek (figures 1-8) teaches of an escutcheon (47) for an appliance door assembly comprising: a control panel mounting surface (49) having a lower edge (note fig. 4), and a plurality of formations (50, 51, 52 for example) depending from the lower edge and defining a retaining slot [slot defined by formations 50 & 51] as readily apparent to the examiner. The formations are viewed as being panel positioning ribs [they receive and position panel (13)]. The ribs comprise a guide surface (viewed as the opposing interior vertical surfaces of the ribs) extending at an angle (perpendicular – 90 degrees e.g.,) with the lower edge. The ribs further comprise a panel engagement portion extending from the guide surface [viewed as any portion of the guide surfaces in as much as applicant depicts this broadly claimed feature]. As to claim 7, the formations are (51, 52). As to claim 8, the escutcheon further comprising a lip (now viewed as 50), and a slot is defined by the guide surface of one formation (51) and the lip. As to claim 9, the panel engagement portion [any portion on guide surface of formation 51] is substantially parallel to the lip.

### ***Response to Arguments***

3. Applicant's arguments, see paper no. 10, filed December 23, 2003, with respect to the rejection of claims 1-2, 4-5 & 7-9 under 103(a) have been fully considered and

Art Unit: 3637

are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of the above cited prior art.

**Conclusion**

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Adams describes an escutcheon with upwardly oriented positioning ribs. Michael et al., Herbst et al., and Barnard et al., describe door constructions for appliances.
